

## Power\*Suite Revisions (Overview)

We are pleased to day that we fixed the ability to change the Log Name which has been a hindrance for may releases.

Added the ability to Print out Striplogs (both vertical and horizontal) and Core Logs to a continuous tiff file (no page breaks) including Striplog headers, location maps, survey views, legends and formation tops.

Changed the LAS Export file to indicate the Contractor rather than us hardcoded into the file. This will allow the end user to identify who created the LAS file.

Fixed some of our spelling errors.

Added the ability to subscribe to our software for the Imperial Version. Also a much more stable temporary License changing our Licensing from Crypkey to QLM Licensing. This will also help our Network Users with the newer operating Systems utilizing a Virtual License Servers.
